# **Acute Ischemic Stroke and Coronavirus Disease 2019: An Analysis of 27,676 Patients**

- **8,163 patients with confirmed COVID-19 among 27,676 patients in the Cerner de-identified COVID-19 dataset.**
- **103 (1.3%) patients developed acute ischemic stroke among 8,163 patients with COVID-19.**
- **199 (1.0%) patients developed acute ischemic stroke among 19,513 patents in whom COVID-19 was excluded.**
- **Of the 103 patients with confirmed COVID-19 and acute ischemic stroke, 94 received their COVID-19 diagnosis during the same encounter that they had acute ischemic stroke.**

# Survivors of SARS-CoV-2 infection

- **New focus on long-term disability among approximately 513 million survivors worldwide.**

## Global Situation

**519,105,112**

confirmed cases

**6,266,321**

deaths

Source: World Health Organization

▨ Data may be incomplete for the current day or week.

February 10, 2020

31,729 Confirmed Cases

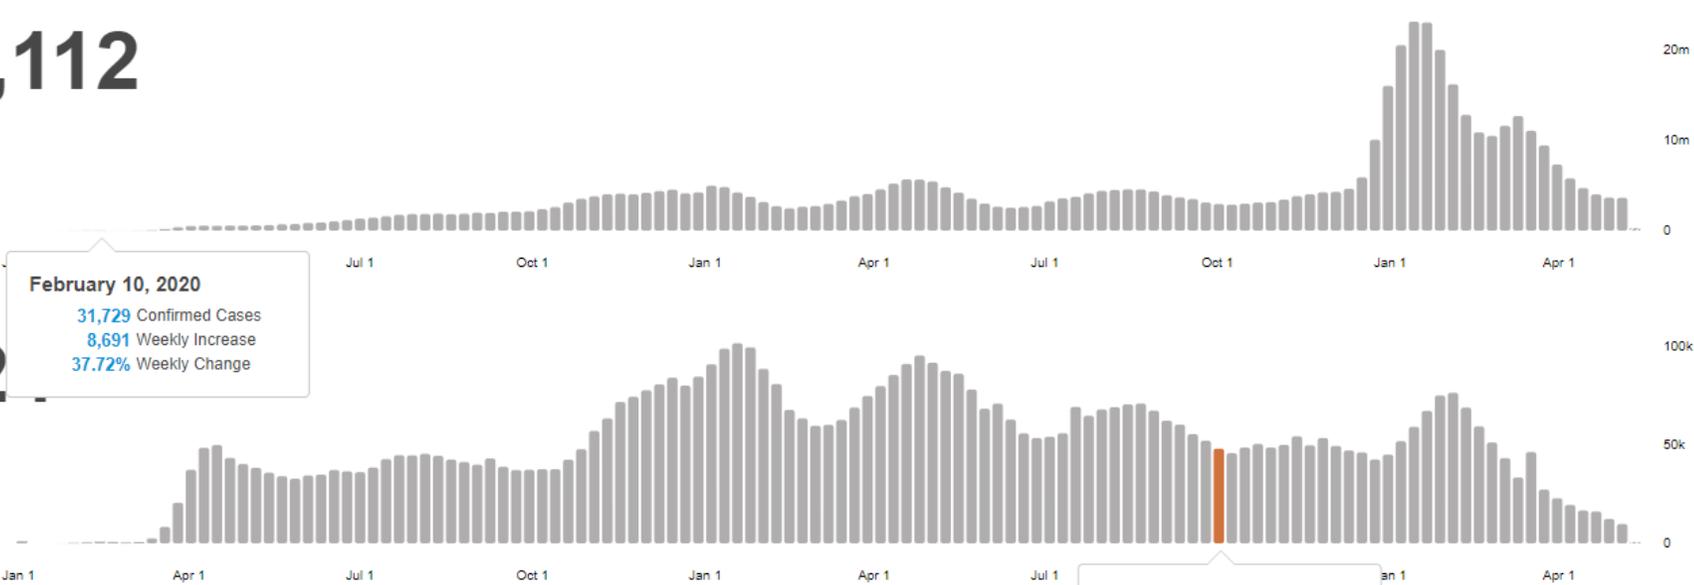

8,691 Weekly Increase

37.72% Weekly Change

October 4, 2021

48,261 Deaths

-4,085 Weekly Decrease

# How many survivors of SARS-CoV-2 infection are present in USA

---

- 20 million
- 40 million
- 80 million
- 160 million

# Survivors of SARS-CoV-2 infection

Hellmuth J. J Neurovirol 2021; 27(1): 191-5.

Taquet M. Lancet Psychiatry 2021; 8(5): 416-27.

# What kind of cognitive deficits do survivors of SARS-CoV-2 infection have:

- 
- Mild cognitive deficits that may or may not be detected by MMSE or MoCA
  - Severe cognitive deficits
  - Dementia that impairs multiple cognitive and functional domains
  - 2 and 3
  - 1,2, and 3

# Cognitive Impairment Among Survivors of SARS-CoV-2 infection

---

- **The prevalence and risk of dementia in survivors of SARS-CoV-2 infection has multiple implications for screening, post recovery care and resources, care-giver burden, and financial and productivity loss.**
- **The impact on public health may be much larger than the acute manifestations of SARS-CoV-2 infection due to lifelong burden of dementia.**

*Re: Qureshi AI, Baskett WI, Huang W, Naqvi SH, Shyu CR. Open Forum Infectious Diseases. 2022 Apr;9(4):ofac115*

Pri		
<b>SARS-CoV-2 infection</b>	<b>1.3(1.1-1.5)</b>	<b>1.3(1.1-1.5)</b>

***The odds of new onset dementia were 30% higher among patients with pneumonia associated with SARS-CoV-2 infection compared with other pneumonias.***

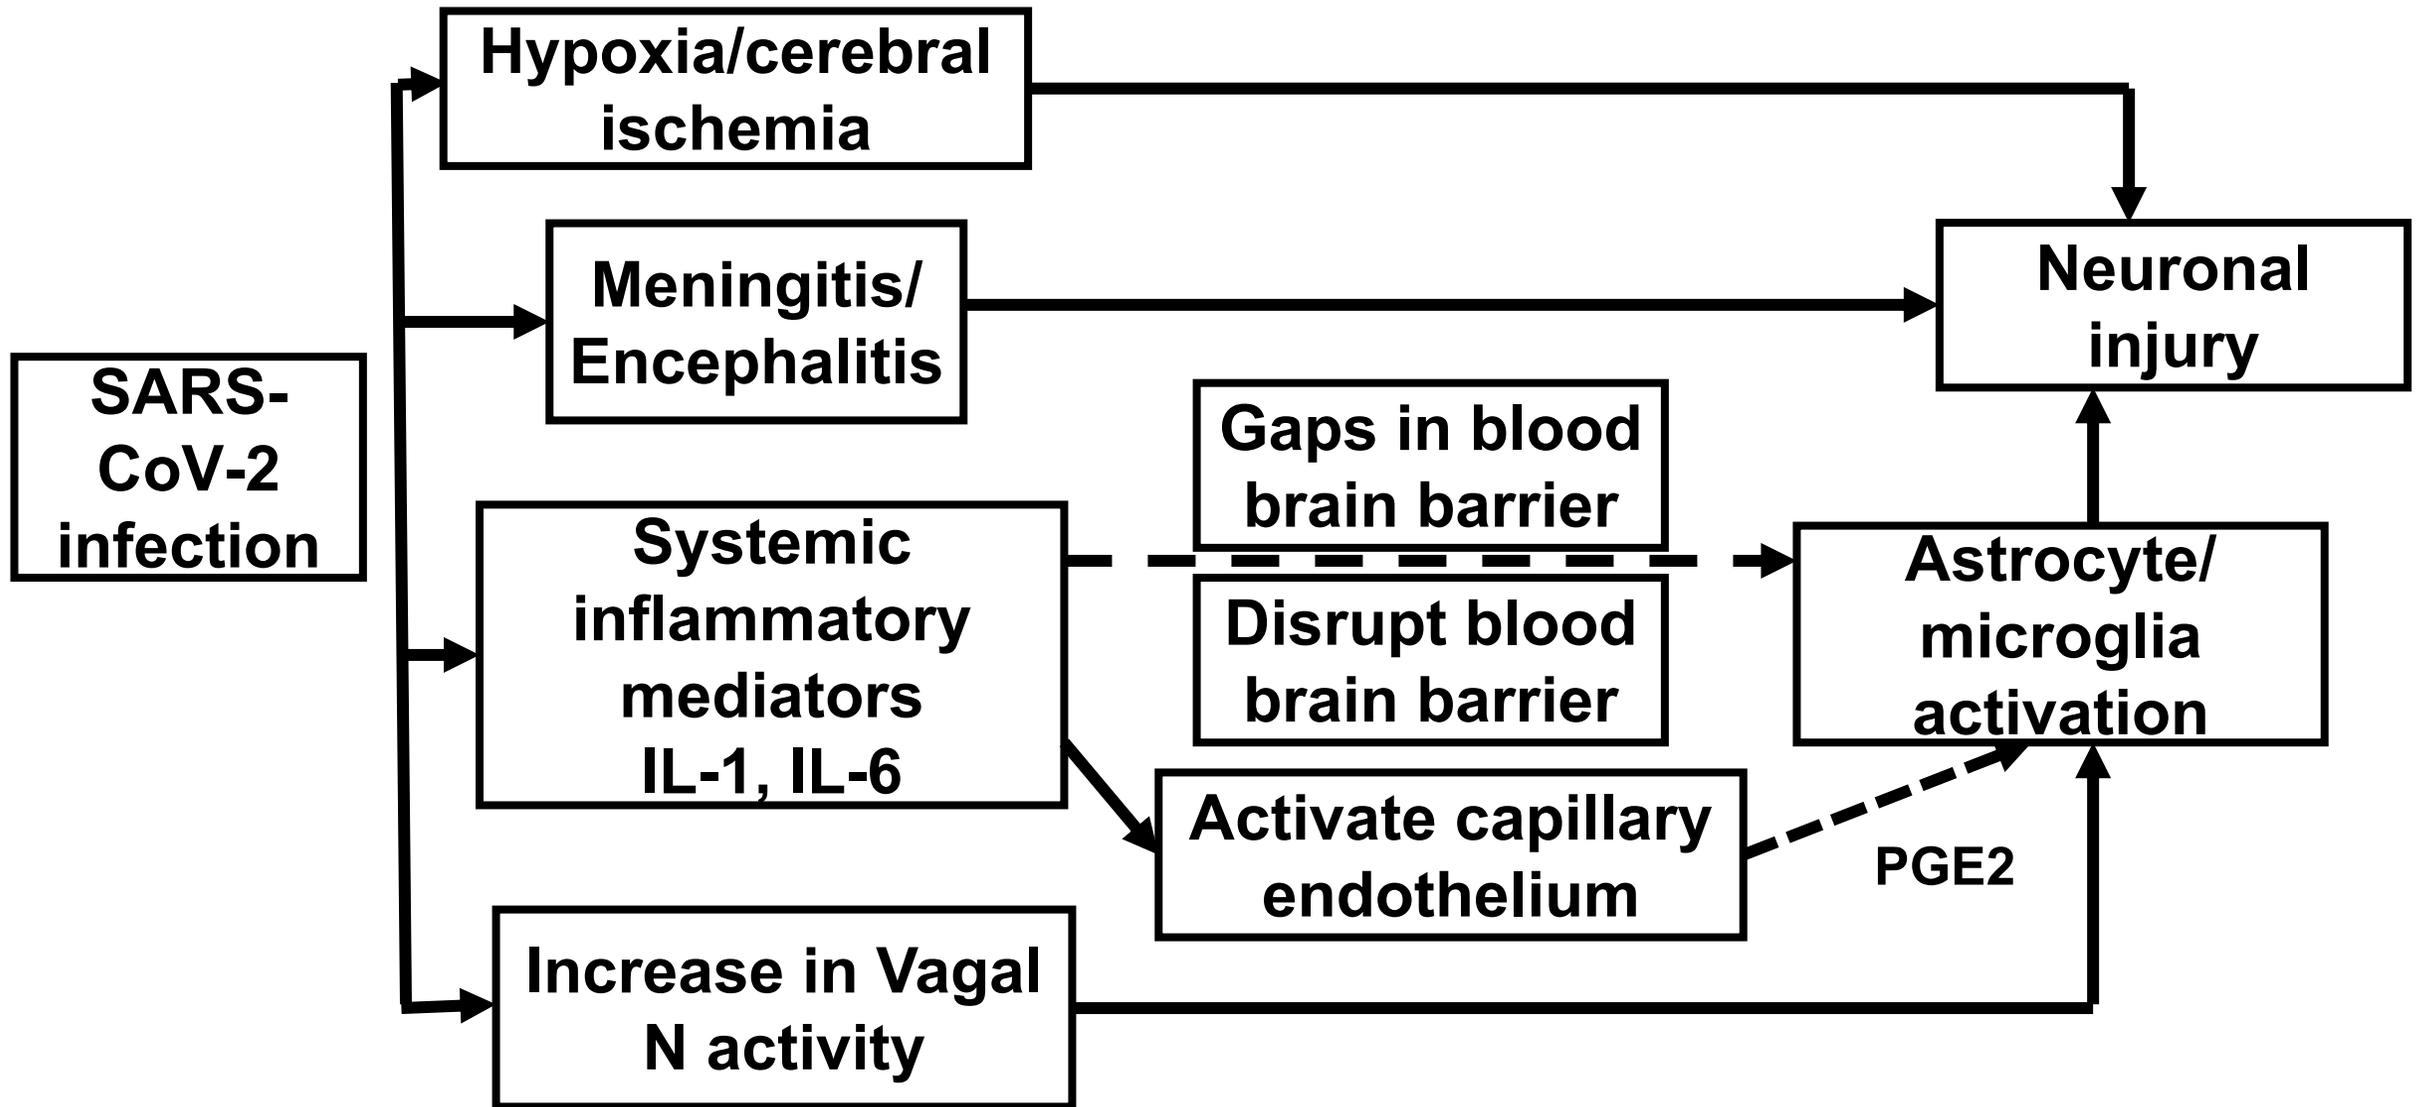

***Model 1. Baseline demographic characteristics+ cardiovascular risk factors +dementia risk factors.***

***Model 2. ++Septic shock, intubation/mechanical ventilation and stroke during reference encounter.***

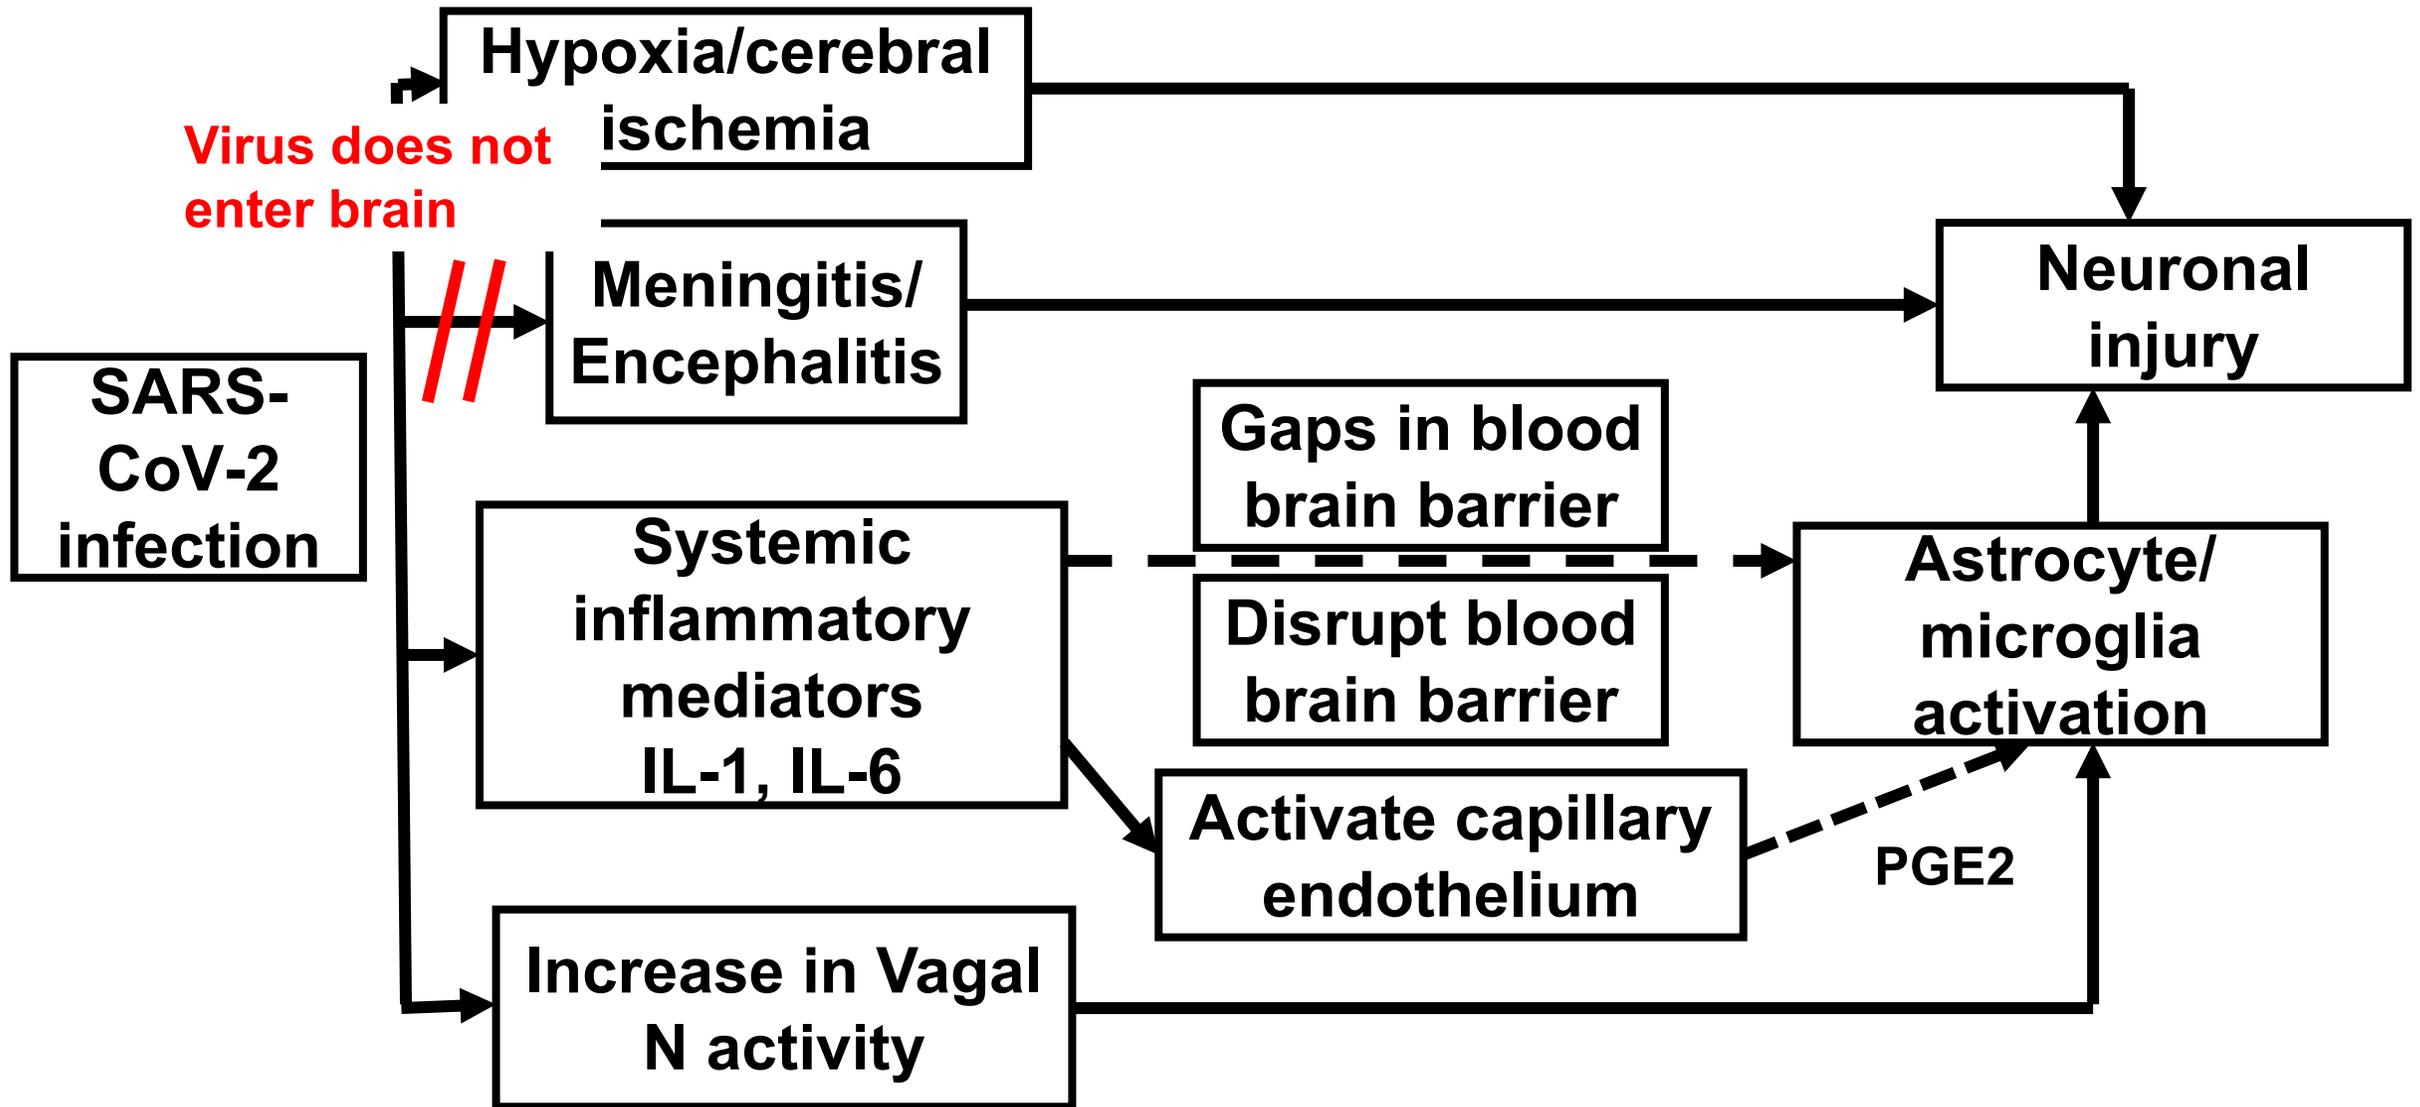

# Identify the true statements about pneumonia and dementia

- Survivors of bacteria pneumonia have a higher risk of dementia than those without pneumonia
- Survivors of SARS-CoV-2 related pneumonia have a higher risk of dementia than survivors of other pneumonia
- Survivors of SARS-CoV-2 related pneumonia have a higher risk of dementia due to higher risk of stroke

# **New Cardiovascular Events Among Survivors of Pneumonia Associated with Severe Acute Respiratory Syndrome Coronavirus 2 Infection-Guidelines**

- **National Institutes of Health COVID-19 treatment guidelines**

**Anticoagulants and antiplatelet therapy should not be initiated for the prevention of venous thromboembolism or arterial thrombosis for non-hospitalized patients with SARS-CoV-2 infection, unless the patient has other indications for the therapy or is participating in a clinical trial (strong evidence based on expert opinion).**

- **Leentjens et al.**

**Routine antithrombotic treatment is not recommended in patients with SARS-CoV-2 infection after discharge based on pathophysiology of SARS-CoV-2 infection related coagulopathy and data from randomized controlled trials.**

Antithrombotic therapy in patients with COVID-19.

<https://www.covid19treatmentguidelines.nih.gov/therapies/antithrombotic-therapy/>. Updated February 11, 2021.

Leentjens J, Lancet Haematol. 2021;8(7):e524-e533.

# Cognitive Impairment Among Survivors of SARS-CoV-2 infection--Implications

---

- Occurrence of new onset dementia may increase the burden of disability among survivors of SARS-CoV-2 infection.
- US President---long-term symptoms of SARS-CoV-2 infection could be considered a disability under federal civil rights laws of Americans With Disabilities Act.
- National Institutes of Health research emphasizes on Long COVID can be debilitating and some people will require assistance with personal care months after the initial infection with 80% reporting difficulty in ability to work and 36% reported negative financial consequences.
- Social Security has released an emergency message giving its employees some guidance on how to handle applications that allege "post-COVID conditions."

# Long-COVID or Post-COVID conditions

- *Dyspnea or increased respiratory effort*
- *Fatigue*
- *Post-exertional malaise and/or poor endurance*
- *“Brain fog,” or cognitive impairment*
- *Cough*
- *Chest pain*
- *Headache*
- *Palpitations and/or tachycardia*
- *Arthralgia*
- *Myalgia*
- *Paresthesia*
- *Abdominal pain*
- *Diarrhea*
- *Insomnia and other sleep difficulties*
- *Fever*
- *Lightheadedness*
- *Impaired daily function and mobility*
- *Rash (e.g., urticaria)*
- *Mood changes*
- *Anosmia or dysgeusia*
- *Menstrual cycle irregularities*

# Long-COVID or Post-COVID conditions

- *Dyspnea or increased respiratory effort*
- *Fatigue*
- *Post-exercise poor endurance*
- *“Brain fog” or cognitive impairment*
- *Cough*
- *Chest pain*
- *Headache*
- *Palpitations*
- *Arthralgia*
- *Myalgia*

- *Paresthesia*
- *Abdominal pain*

## **Interim Guidance on Evaluating and Caring for Patients with Post-COVID Conditions**

The U.S. Centers for Disease Control and Prevention recommends using the umbrella term “post-COVID conditions” for a wide range of signs and symptoms that occur 4 or more weeks after acute COVID-19 infection.

***Standardized case definitions are still being developed....***

- *Anosmia or dysgeusia*
- *Menstrual cycle irregularities*

# Long-COVID or Post-COVID conditions

- *Dyspnea or increased respiratory effort*
- *Fatigue*
- *Post-exertional malaise and/or poor endurance*
- *“Brain fog,” or cognitive impairment*
- *Cough*
- *Chest pain*
- *Headache*
- *Palpitations and/or tachycardia*
- *Arthralgia*
- *Myalgia*
- *Paresthesia*
- *Abdominal pain*
- *Diarrhea*
- *Insomnia and other sleep difficulties*
- *Fever*
- *Lightheadedness*
- *Impaired daily function and mobility*
- *Rash (e.g., urticaria)*
- *Mood changes*
- *Anosmia or dysgeusia*
- *Menstrual cycle irregularities*

# Cognitive Impairment Among Survivors of SARS-CoV-2 infection—Next Steps

---

- **Screening for cognitive deficits among survivors of SARS-CoV-2 infection. Several screening tests are available for use in survivors of SARS-CoV-2 infection including Saint Louis University Mental Status (SLUMS) Examination, Montreal Cognitive Assessment (MoCA) and the Mini-Mental State Examination (MMSE).**

**WHO --- WHEN ---HOW --- THAN WHAT...**

- **Social Security may have to establish new onset dementia as a "medically determinable impairment," or MDI to determine whether SARS-CoV-2 infection survivors are unable to work for 12 months and thus eligible for benefits.**
